

TR8 Intercooler Test by Damir E. S.  
mescaline user id on VWvortex Forums

“So i finished installing Treadstone IC (TR8 core) with Audi TT manifold (Throttle body on drivers side). 2" from turbo to intercooler and 2.5" from intercooler to throttle body. It was 16C outside and logs were taken after beating on car for like half an hour or something. While beating on car I would occasionally look at intake temperature and I never saw it hit 40C mark, usually it would be around 30-32C. Logs were taken in 4th gear.”

“Quality of IC core is superb, welds are pro, never seen something so beautiful before honestly”
